EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Champagne on 5/14/2010.

The Examiner has made the following changes to the claims. Additions to the claims are reflected by underline (example) and deletions are reflected by strikethrough (~~example~~):

Claim 2 (Currently Amended)

A method for training at least one artificial learning-capable system comprising the steps of:

providing a predetermined training data set comprising a predetermined input data set and a predetermined outcome data set corresponding to input data for each of a respective predetermined number of subjects ~~comprising a predetermined input data set and a predetermined outcome data set~~,

~~augmenting the input data set and/or the outcome data set according to predetermined criteria,~~

~~wherein the augmenting step comprises the steps:~~
observing survival data relating to patient survival of J subjects,

recording covariates denoted $x_{q(j)}$ at a reference time $t=0$ relating to events that have not occurred, $q=1, \dots, Q$ ~~(in vector notation $x(j)$)~~, $j=1, \dots, J$, referring to the ~~for each~~ subject ~~number~~ in any order,

recording special covariates denoted $z_p(j)$ relating to treatments received by each subject, $p=1, \dots, P$ ~~(vector notation $z(j)$)~~,

assuming each subject represents a random sample drawn from a large pool of subjects with identical covariates x, z , defining the conditional probability $S(t|x,z)$ for surviving to time t given x, z ,

estimating the p -th propensity score $\Phi_p(x(j))$ ~~of subject j for treatment p~~ corresponding to the probability for subject j to have treatment $z_p=1$,

categorizing the propensity scores into a number N_p of categories, designated as strata, and

augmenting the input data set and/or the outcome data set by the propensity scores and/or the stratum categorization, and

training each artificial learning-capable system using the augmented input data set and/or the augmented outcome data set that was augmented according to the augmenting step, through the use of a computing device.

Claim 3

In line 5, replace "**of the neural network $NN_{kl}(X)$ with $X=\{x,z\}$, provided by the neural network, given the**" with -- **of the learning capable system $NN_{kl}(X)$ with $X=\{x,z\}$, provided by the learning capable system, given the--**

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: claims 2-20 are considered allowable since none of the references of record alone or in combination disclose or suggest **the combination of limitations** specified in the independent claims, and at least observing survival data relating to patient survival of subjects, recording covariates at a reference time relating to events that have not occurred for each subject, recording special covariates denoted relating to treatments received by each subject, defining the conditional probability, estimating the p-th propensity score corresponding to the probability for a subject to have a treatment and categorizing the propensity scores into a number of categories, designated as strata, and augmenting the input data set and/or the outcome data set by the propensity scores and/or the stratum categorization as described in independent claim 2.

Barnhill et al. (US Patent #6,306,087) discloses a reasoning system for diagnosing a disease and provide treatment for a patient. Patient data is received and analyzed by a trained neural network which produces a diagnostic value and optionally transmit the value to another location.

Campell et al. (US Patent #6,059,724) a system for predicting future health of individuals. Biomarker values from a test population identified to have a biological condition. A subset of biomarkers for discriminating between members of the population is selected. A probability is determined for the test population that describes whether the population will develop the biological condition described by the biomarkers.

Barnhill, Campbel and all other prior art of reference either alone or in combination, fail to teach the combination of limitations described in independent claim 2 without unduly motivating one of ordinary skill in the art to exert substantial experimental effort to integrate such combination concepts.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. Claims 2-20 are allowed.
